According to an article by Team Wanderlust on 9 March 2020, they listed 10 of the world's most endangered animals. Wanderlust is a Travel Magazine in the UK, where articles and readings are posted. As per the article I chose number eight which are the Snow Leopard's, for the reason being to bring aware that is "...estimated to be between 4,080 to 6,590" left in population (Team Wanderlust 2020). Snow Leopards are "...threatened by herders who kill snow leopards to prevent them from preying on their livestock", alongside poachers as well (Team Wanderlust 2020).

According to a different article on Treehugger written by Mary Jo DiLonardo on 30 July 2020, titled "Why the Snow Leopard Population Is Decreasing", Mary states that in 2017 the status of the Snow Leopard changed from endangered to vulnerable. The main threats for the Snow Leopards as per Mary are "Habitat Loss", "Poaching", "Decline in Prey", "Competition With Lifestock", "Retaliatory Killing and finally "Climate Change" (2020).

Some interesting fact about Snow Leopard from an article by Eliot McFarlane on the Wanderlust website are that these leopards live in Central Asia, they have specific bright blue eyes and they cannot roar (2019).

Habitat

Diet and Hunting

Threats to survival

Conservation

High Mountain Ranges  
Himalayas

Blue Sheep  
Mountain Ibex

Poachers  
Plant Trees  
Climate Change

Protected Areas  
Against Poachers
